BASE AND LINER. THE THERA WAY.

Rx Only

# TheraBase™

Self-Adhesive Calcium Releasing Base/Liner

## New to the THERA family

TheraBase is a dual-cure, calcium and fluoride releasing, self-adhesive base/liner. Utilizing the THERA technology, TheraBase chemically bonds to tooth structure, and releases and recharges calcium and fluoride ions.<sup>1</sup> TheraBase's calcium release generates an alkaline pH which promotes pulp vitality.<sup>2</sup> It is a dual-cured material that will polymerize even in deep restorations where light cannot reach.

TheraBase is stronger and more durable than other base materials, glass ionomers and resin-modified glass ionomers.\* Additionally, it is radiopaque allowing for easy identification on radiographs, providing a quick and effective diagnosis.

### TheraBase Benefits

#### Releases Calcium and Fluoride

Continuous release of Calcium and Fluoride ions<sup>1</sup>

#### Easy to use

Auto-mix, dual-syringe provides a consistent mix for immediate delivery with zero to minimal waste of material.

#### Self-adhesive

No bonding agents required - Save time and money

#### Dual-Cured

Material will fully cure even in deep restorations where light cannot reach.

#### High flexural strength

Stronger and more fracture resistant

#### Alkaline pH

Generates an Alkaline pH (pH=11\*) in minutes, which promotes pulp vitality<sup>2</sup>

#### High compressive strength

Absorbs shock and stress from occlusal forces without fracturing

#### High degree of conversion

Ensures enhanced physical properties

MDP

#### Contains MDP

Contains the adhesion promoting monomer MDP, ensuring reliable and optimal bond to dentin<sup>3</sup>

#### Radiopaque

TheraBase is radiopaque allowing for identification on radiographs and effective diagnosis.

■ DUAL-CURED

■ EASY APPLICATION

■ RADIOPAQUE

■ ALKALINE pH

### THERA HYDROPHILIC MATRIX

BISCO has developed a hydrophilic matrix that allows for ion exchange. Previous or traditional resin matrices have been hydrophobic, but BISCO's matrix allows for ion exchange as water goes into the matrix, reacts, and calcium hydroxide ions and fluoride ions are released.

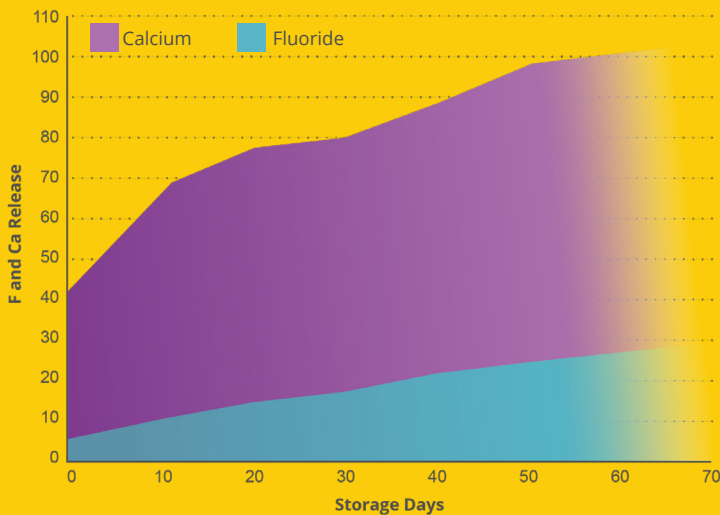

At the calcium-rich interface between TheraBase and the dentin, an alkaline pH environment is created.

In deep restorations and when pulp exposure occurs, BISCO recommends the use of TheraCal LC for direct and indirect pulp capping and as a liner.

Both TheraBase and TheraCal LC can be used together in a sandwich technique case scenario for optimum calcium and fluoride release benefits and ultimate pulp protection.

### TheraBase Continuous Fluoride and Calcium Release<sup>1</sup>

### Compressive Strength

Trademarks are property of their respective manufacturers. Fuji II LC and Vitrebond Plus are light-cured only materials.

# TheraBase Case

Dentistry courtesy of Dr. Raul Euan DDS

After cavity preparation, all water was removed using a stream of air, leaving the surface visibly moist. TheraCal LC was applied on small pulp exposure and light-cured for 20 seconds.

TheraBase was applied to the dentin surface of the prepared cavity directly from the dispensing syringe.

TheraBase was light cured for 20 seconds. If desired, TheraBase can be allowed to self-cure for 4 minutes.

A selective-etch bonding technique was used to condition the surface of the preparation. Any bonding technique can be applied.

All-Bond Universal<sup>®</sup> was applied following manufacturer's instructions.

Restorations were filled with a light-cure composite material following manufacturer's instructions.

## Ordering Information

**TheraBase Single Syringe Pack**.....**H-35001P**  
1 Syringe TheraBase (8g), Accessories, Instructions

**Auto-Mix Cannula Tips (30)**.....**X-81270P**

Exclusively distributed by Curion
