			Secondary: 2 Weeks
			Bottle Conditioning: 2 Weeks

GRANDMA'S SECRET STASH

Just like grandma used to do, stash some of this delicious treat out of view and hoard it for yourself. The intoxicating aromas and flavors of freshly baked oatmeal raisin cookies is surely a fond memory, and now that we are all grown up, why not craft a stout to reminisce? Pleasant, subtle aromas and flavors of raisin, cinnamon and vanilla engage with the velvety body of a traditional oatmeal stout to create an immensely pleasing and highly elaborate sipping experience.

KIT INVENTORY

GRAIN BILL

- 6 lbs Rahr 2-row
- 4.5 lbs Simpsons Golden Promise
- 1 lb Flaked Oats
- 0.5 lbs Belgian Biscuit Malt
- 0.5 lbs Briess Chocolate Malt
- 0.5 lbs English Roasted Barley
- 0.5 lbs Belgian Special B
- 0.25 Briess Black Malt

PREMIUM HOPS & OTHER FLAVORINGS

- 1 oz Brewer's Gold Hops
60 min
- 4 oz Dark Rum Soaked Raisins
5 min not included
- 2 Sticks Dark Rum Soaked Cinnamon
Fermenter Addition
- 15 grams Vanilla Powder
Fermenter Addition

SUGGESTED YEAST

YEAST

- DRY YEAST:
Fermentis Safale S-04
Optimum Temp: 64°- 75°F
- LIQUID YEAST OPTIONS:
Wyeast 1084 Irish Ale
Optimum temp: 62°- 72°F
- Imperial Yeast A10 Darkness**
Optimum temp: 62°- 72°F
- Omega Yeast OYL-005 Irish Ale**
Optimum temp: 62°- 72°F

BEFORE BREW DAY

- Upon arrival, unpack kit.
- Read all instructions before starting.
- Be sure you have all items listed in the Kit Inventory.
- Refrigerate liquid yeast.
- Add 4 oz raisins to a glass and add enough dark rum to cover them. Cover and allow to rest for one day before brewing.
- If making a yeast starter, we suggest 24-48 hrs.
- Contact us if you have any questions or concerns.

YOU WILL NEED

- Homebrewing equipment for brewing 5 gallon batches.
- All-grain equipment kit with mash tun and hot liquor tank
- Boiling kettle (at least 8 gallon capacity).
- Approx. 2 cases of 12 oz or 22 oz pry-off beer bottles.
- 8 oz Dark Rum (For soaking raisins, vanilla powder, and cinnamon sticks)
- 4 oz Raisins (Soaked in enough dark rum to cover them for 1 day before brewing)
- **Optional** - 5 gallon carboy, with bung and airlock, to use as secondary fermentor.

A FEW HOURS BEFORE BREW DAY

Remove liquid yeast packages from the refrigerator. Leave in warm place (~70°F). Check yeast instructions on packet.

Important Additions: _____

Bottling/Kegging: _____

Fermentation Temp: _____

Yeast Strain #: _____

Measured OG: _____ FG: _____

MASH SCHEDULE

SINGLE INFUSION

If you are new to all-grain, we suggest starting with 1.5 quarts of water per pound of grain for strike water volume. This mash thickness can be adjusted for future brews as you become more comfortable with your equipment.

Saccharification Rest: 152° F for 60 minutes

Mashout: 168° F for 10 minutes (optional)

To raise the temp for mashout, gently apply direct heat while stirring well (if using a kettle), or add near boiling water until target temp is reached.

Prepare sparge water in hot liquor tank at 2 quarts per pound of grain. Perform a fly sparge until you reach pre-boil volume (6-7 gallons) in your kettle. Sparge should take about an hour for optimal extraction efficiency. You should end with extra sparge water in hot liquor tank. Use this hot water to clean later on.

BOIL ADDITIONS & TIMES

Total time: 60 mins

- 1 oz Brewer's Gold hops at the start of boil
- 4 oz Dark Rum Soaked Raisins 5 min

PRIMARY FERMENTATION

10. *Within 48 hours* Active fermentation begins.

You'll see a cap of foam on the surface of the beer. Specific gravity as measured with a hydrometer will drop steadily. You may see bubbles in the fermentation lock. The optimum temp. for this beer is 65°- 70°F.

11. *Within 1-2 weeks* Active fermentation ends.

Proceed to next step when:

- Cap of foam falls back into the beer.
- Bubbling in airlock slows down or stops.
- Specific gravity as measured with a hydrometer is stable.

SECONDARY FERMENTATION (OPTIONAL)

NOTE: You may skip secondary fermentation and simply add 2 weeks to primary fermentation before bottling.

- Sanitize siphoning equipment, airlock, carboy bung or stopper. Siphon beer from primary fermenter into secondary.
- Allow beer to condition in secondary fermenter for 2 weeks before proceeding with the next step. Timing is now somewhat flexible.
- Add cinnamon sticks to a glass with vanilla powder and add enough dark rum to cover them. Cover glass and rest for 1 day before proceeding.
- Add the dark rum soaked vanilla and cinnamon to the fermenter 5-7 days before bottling.

AFTER THE BOIL

- When 60 minute boil is finished, remove from heat. Allow hops to steep for 5 minutes before cooling wort.
- Cool wort to 65°-70°F ASAP.
- Sanitize fermenting equipment and yeast pack: While wort cools, sanitize fermenting equipment (fermenter, lid or stopper, airlock, funnel, etc) along with yeast pack.
- Transfer cooled wort into primary fermentation vessel using valve on boil kettle, siphoning from boil kettle, OR pouring wort into fermenter.
- Aerate wort. Seal fermenter and rock back and forth to splash for a few minutes, or use an aeration system and diffusion stone.
- Measure specific gravity of wort with a hydrometer. Record. Target gravity for this kit is 1.064.
- Add yeast once temp of wort is between 65°-70°F. Sanitize and open yeast pack. Carefully pour contents into primary fermenter.
- Seal fermenter. Add 1 tbsp of sanitizer or clean water to sanitized airlock. Insert airlock into rubber stopper or bucket lid. Seal fermenter.
- Move fermenter to a warm, dark, quiet spot until fermentation begins.

BOTTLING DAY (ABOUT 4 WEEKS AFTER BREWING DAY)

- Sanitize siphoning and bottling equipment.
 - Mix a priming solution (sugar dissolved in water; carbonates bottled beer). Use the following amounts, depending on which type of sugar you use:
 - Corn sugar (dextrose) 2/3 cup in 16oz water.
 - Table sugar (sucrose) 5/8 cup in 16oz water.
- Bring solution to a boil. Pour into bottling bucket.
- Siphon beer into bottling bucket and mix with priming solution. Stir gently to mix - *do not splash*.
 - Fill and cap bottles.

CONDITIONING (ABOUT 6 WEEKS AFTER BREWING DAY)

- Condition bottles at room temp. for 1-2 weeks. After this point, store bottles cool or cold.
- Serving: Pour into a clean glass. Be careful to leave any sediment at the bottom of the bottle. Cheers!

WE'VE GOT YOUR BATCH.

We're so confident in the quality of our beer kits, we'll replace any kit, anytime, no questions asked.
