

Instructions for using your locking 2-pulley ratchet.

Locate a secure point on which to hang the S hook which is next to the small metal pulley. Push the thumb lever located in the open side of the black ratchet pulley to release the locking mechanism and drop the black ratchet pulley to within reach of the object you want to lift. - **LOAD LIMIT 250 POUNDS** - If the ratchet pulley when lifted will be higher than you can safely reach, attach the 1/8" black cord to the hole drilled in the thumb release and let it hang. Attach the object you want to lift to the black pulley S hook so it is loosely attached but will not fall off. Making sure the rope is aligned correctly through the small metal pulley, begin to pull on the loose end of the rope so that tension is now applied to the object and the rope is taught. You can now pull freely to lift the object. No need to tie off as the ratchet locks in place to hold the object.

To release and lower the object.

There is a lever on the open side of the ratchet that releases the lock and allows the rope to move freely back and forth. When ready to release the raised object, apply tension to the loose end of the rope - this will prevent the object from dropping rapidly - and push the lever. While holding the rope you can now control and lower the object safely. If you have attached the 1/8" black cord to the lever release, apply tension to the 3/8" rope and pull the black cord down to release the locking ratchet. **WARNING** - When the lever is pushed the object will be free to fall. To prevent injury, always apply tension to the loose end of the 3/8" rope before pushing the lever release. Use caution when using this system and be advised that practicing with a partner, or by using a lighter weight a few times before actual use will allow you to use the system safely.

Warnings

Inspect the rope and system for wear before each use

Using this system for anything other than intended can result in bodily harm

Do not use if damaged

Load limit is 250 pounds - for safe use do not exceed this limit

This system is not to be used for athletics, play of any kind, or to support a human.

How you attach this system for use is critical to safe operation and out of our control. Be certain the point of attachment is capable of holding the weight to be lifted. The Brew Bag is NOT responsible for the attachment or how the system is installed. We will not be liable, nor can we accept responsibility for damage due to misuse or improper attachment.
