

CASHMERE BLONDE ALE

Cashmere is one of the newer hops in the brewer's arsenal, so naturally we had to make a recipe kit making it the star of the show. With promising smooth bittering potential and complex fruit and herbal qualities, it is the perfect candidate for a single-hop brew, and Cashmere Blonde Ale is built to show off this new hop's talents. Effortless to brew, it pours with a smooth, golden radiance. Upon sipping, a soft, supple malt body comes to the front, with delicate fruit-forward flavors washing over the palate. Cashmere hops offer a bouquet of lemon and lime citrus, melon and faint lemongrass notes, which are perfectly supported by this recipe's simple malt underpinnings.

O.G: 1.050 | **BREW TIME 6 WEEKS:** 2 WEEKS PRIMARY | 1-2 WEEKS SECONDARY | 1-2 WEEKS BOTTLE CONDITIONING

KIT INVENTORY

MAILLARD MALTS SPECIALTY GRAIN

- 0.5 lbs Briess Caramel 10L

MAILLARD MALTS EXTRACTS & OTHER FERMENTABLES

- 6 lbs Gold malt syrup
- 1 lb Golden Light DME

NORTHERN BREWER PREMIUM HOPS

- 0.5 oz Cashmere (60 min)
- 1.5 oz Cashmere (5 min)
- 1 oz Cashmere (dry hop)

YEAST

Dry Yeast:

- Fermentis Safale US - 05. Optimum Temp: 59°- 75°F

Liquid Yeast Options:

- Omega Yeast OYL - 004 West Coast Ale I. Optimum temp: 60°- 73°F
- Wyeast 1056 American Ale. Optimum temp: 60°- 72°F

UPON ARRIVAL UNPACK THE KIT

- Be sure you have all items listed in the Kit Inventory (above)
- Refrigerate the yeast
- Contact us immediately if you have any questions or concerns!

READ ALL INSTRUCTIONS BEFORE STARTING

YOU WILL NEED:

- Homebrewing starter kit for brewing 5 gallon batches
- Boiling kettle of at least 3.5 gallons capacity
- Optional - 5 gallon carboy, with bung and airlock, to use as a secondary fermenter. NOTE: You may skip the secondary fermentation and add an additional 2 weeks to primary fermentation before bottling
- Approximately two cases of either 12 oz or 22 oz pry-off style beer bottles

A FEW HOURS BEFORE BREW DAY

Remove the liquid yeast package from the refrigerator, and leave it in a warm place (~70°F) to come to pitching temperature. If you are using Wyeast, smack the pack as shown on the back of the package and allow to swell for at least 3 hours. Do not brew with inactive yeast - contact customer service for advice or a replacement. If you are using dry yeast, no action is needed.

ON BREWING DAY

1. Heat 2.5 gallons of water.
2. Pour crushed grain into the supplied mesh bag, and tie the open end in a knot. Steep for 30 minutes at 150°-160°. Remove bag, drain and discard.
3. Bring to a boil, remove kettle from the burner and stir in the 6 lbs Gold malt syrup and 1 lb Golden Light DME.
4. Return wort to a boil. The mixture is now called "wort", the brewer's term for unfermented beer. NOTE: Total boil time for this recipe is 60 minutes.
 - Add 0.5 oz (half a packet) Cashmere hops at the beginning of the boil
 - Add 1.5 oz Cashmere hops with 5 minutes remaining in the boil
5. Cool the wort. When the 60 minute boil is finished, cool the wort to approximately 100° F as rapidly as possible. Use a wort chiller, or put the kettle in an ice bath in your sink.

ON BREWING DAY – CONTINUED		SECONDARY FERMENTATION - OPTIONAL*	
<div>6. Sanitize fermenting equipment and yeast pack. While the wort cools, sanitize the fermenting equipment – fermenter, lid or stopper, airlock, funnel, etc – along with the yeast packet.</div> <div>7. Fill primary fermenter with 2 gallons of cold water, then pour in the cooled wort. Leave any thick sludge in the bottom of the kettle.</div> <div>8. Add more cold water as needed to bring the volume to 5 gallons.</div> <div>9. Aerate the wort. Seal the fermenter and rock back and forth to splash for a few minutes, or use an aeration system and diffusion stone.</div> <div>10. Measure specific gravity of the wort with a hydrometer and record in the "BREWER'S NOTES" section.</div> <div>11. Add yeast once the temperature of the wort is 75°F or lower (not warm to the touch). Sanitize and open the yeast pack and carefully pour the contents into the primary fermenter.</div> <div>12. Seal the fermenter. Add approximately 1 tablespoon of water to the sanitized fermentation lock. Insert the airlock into rubber stopper or lid, and seal the fermenter.</div> <div>13. Move the fermenter to a warm, dark, quiet spot until fermentation begins.</div>		<div>17. Allow the beer to condition in the secondary fermenter for 1-2 weeks before proceeding with the next step. Timing now is somewhat flexible. * See the "YOU WILL NEED" section and step 16 above. Add 1 oz Cashmere hops to the new beer 5 to 7 days before packaging.</div>	
PRIMARY FERMENTATION		PACKAGING DAY - ABOUT 1 MONTH AFTER BREWING DAY	
<div>14. Active fermentation begins. Within approximately 48 hours of Brewing Day, active fermentation will begin – there will be a cap of foam on the surface of the beer, the specific gravity as measured with a hydrometer will drop steadily, and you may see bubbles come through the fermentation lock. The optimum fermentation temperature for this beer is 65°- 70° F. Move the fermenter to a warmer or cooler spot as needed.</div> <div>15. Active fermentation ends. Approximately two weeks after brewing day, active fermentation will end. When the cap of foam falls back into the new beer, bubbling in the air lock slows down or stops, and the specific gravity as measured with a hydrometer is stable, proceed to the next step.</div> <div>16. Optional - Transfer beer to secondary fermenter. Sanitize siphoning equipment and an airlock and carboy bung or stopper. Siphon the beer from the primary fermenter into the secondary. If you do not have a secondary fermenter, simply leave the beer in the primary fermenter.</div>		<div>18. Sanitize siphoning and bottling equipment.</div> <div>19. Mix a priming solution (a measured amount of sugar dissolved in water to carbonate the bottled beer). Use the following amounts, depending on which type of sugar you will use:<ul style="list-style-type: none">• Corn sugar (dextrose) 2/3 cup in 16 oz water.• Table sugar (sucrose) 5/8 cup in 16 oz water.</div> <div>20. Siphon beer into bottling bucket and mix with priming solution. Stir gently to mix—don't splash.</div> <div>21. Fill and cap bottles.</div>	
		CONDITIONING- ABOUT 1 MONTH AFTER BOTTLING DAY	
		<div>22. Condition bottles at room temperature for 1–2 weeks. After this point, the bottles can be stored cool or cold.</div> <div>23. Serving. Pour into a clean glass, being careful to leave the layer of sediment at the bottom of the bottle. Cheers!</div>	
		BREWERS NOTES	
<div>At Northern Brewer, we've always got your back. Our Brewmasters are available 7 days a week to help you brew your very best, and it doesn't end until you're completely happy with your latest batch...and looking forward to the next one. We'll never let you fail. Guaranteed.</div>
