

DIRECTIONS FOR RETENTION PIN

- Lavario was designed to work well in both cold and hot water.
- However, in some cases when water temperature is very hot and cycling up & down is very vigorous, the lid may slowly wiggle off.
- We have provided a retention pin (A) to prevent this.
- If you use the pin, be sure to align the hole on the lid (B) with the hole on the basket (C).
- After the lid is attached to the basket, simply insert the pin through both holes (B & C).
- You may store the pin in the hole on the lid handle (A).
