

Muslin Track System (MTX)

The system can be fixed directly to the ceiling by drilling holes in the track or can be mounted using the Ceiling Brackets that are provided (Bracket-C). Brackets should be placed approximately every 36" to 48" to properly support the system. The bracket should be aligned in order for the system to operate correctly.

The Muslin Track System could also be wall mounted using an additional wall bracket (Bracket-W). One wall bracket is required per every 3ft for a proper hold

Track splices should be used to connect both the straight and curved pieces. (Splice-1)

A 90° Corner is available to extend the Muslin Track to wrap around your studio wall (MTX-90). When the wall is measured, subtract 1.5ft per side to accommodate the corner piece.w

End Stop Assembly should be placed at the end of the track (End-1). The End Stop Cap can be removed to install the Muslin Carrier Hooks (MCH-15).

The Muslin Clip (MC-15), should be utilized to attached a non-grommited backdrop to the track system. One clip is required for every 12" for proper support. Place Muslin between the back of the clip and the eye of the Clip. Slide upwards to "pinch" the muslin between the clip. Then hang your Muslin on the Carrier Hooks (MCH-15).

MTX-90

MTX

- All MTX-90 (90 degree corners) are 36" long.
- Each MTX-90 (90 degree corner) accounts for 1 1/2' of space each direction. To estimate track along 1 side using two MTX-90 (90 degree corners), you must subtract a total of 3' from the total wall space. Therefore, if only one MTX-90 is used, subtract 1 1/2' from the total space available. Example: If 8' is the available space on one side and only one MTX-90 is used, you would need one 6 1/2' Freedom Cloth® Track Section.
- A 10' wide Freedom Cloth® backdrop takes up 1' - 1 1/2' of storage space on the system.
- To hang your Freedom Cloth® backdrop, most prefer to use one MCH-15/MC-15 per foot of the backdrop
