

MFC Offroad PDCV2 Wiring Diagram

The red cable will wire to the included fuse tap to be used in the fuse box. Common switched circuits are found as 12 volt cigarette or other power outlets. Please refer to you the legend printed on the inside of your fuse box cover.

The yellow cable is not used in this application.

The white cable controls the brightness of the LED backlights on the controller. Once you tap it off on the positive terminal inside the brain box, it saves it.
