

HANDLEIDING

## TUINKAMER HELENE TUINKAMER SOPHIE

**ACD ALU HOBBY SERRE®**

LA NOTICE

## ORANGERIE HELENE ORANGERIE SOPHIE

Beste klant,

Proficiat met de aankoop van uw serre.

Door deze handleiding is geen technische voorkennis vereist.

Doorneem alles stap per stap, zodat noodzakelijke onderdelen en handelingen voorbereid zijn.

## Veiligheid en efficiëntie

Glas is zwaar, scherp en breekbaar.

Een ladder is hoog en wankel.

Aluminiumprofielen zijn soms lang en scherp.

Wees voorzichtig als u niet dagelijks met deze grondstoffen werkt.

Kinderen blijven beter uit de buurt!

Veiligheidsschoenen, een veiligheidsbril en handschoenen kunnen hierbij helpen, bij de montage van glas zijn deze een must.

## Gereedschappen:

- 2 sleutels met sleutelwijdte 10mm

- mes of een stevige schaar

- sterschroevendraaier (groot type)

- platte schroevendraaier (groot)

- waterpas

- spade

- touw of een meter van min. 5 meter

- ladder (die op zichzelf kan blijven staan)

Toebehoren verkrijgbaar in elke doe-het-zelf winkel:

-kleurloze, neutrale silicone

-sneldrogende beton, om uw serre vast te ankeren

## Weetjes

- Boutgleuven zijn gleuven waar de kop van een bout in past.

Bijna elk profiel in deze serre bezit 1 of meerdere boutgleuven.

- Bij verbindingen met boutgleuven, steeds de profielen goed tegen elkaar drukken.

- Wachtbouten zijn bouten die we in een gleuf schuiven als voorbereiding voor een latere montage, op een tiental centimeter van het profieleinde houden moeren ze voorlopig vast.

- Een serre bestaat uit 2 gevels, 2 zijwanden en 1 dak.

- Indien niet specifiek vermeld, worden steeds korte bouten (M6x10) gebruikt.

## Advies

Gebruik steeds alle detailzichten als hulpmiddel voor het uitlijnen, uitrichten en positioneren van uw profiel. Let op doorsnede en gaten.

De moeren enkel 2 toertjes op de bouten draaien, pas na het doorlopen van de volledige pagina de bouten en moeren definitief aanspannen.

## **Cher client**

Félicitations avec l'achat de votre serre. Cette notice de montage vous aidera à installer cette serre sans aucune connaissance technique préalable. Parcourez d'abord chaque étape cette notice, pour préparer tous les éléments et les opérations avant d'entamer le montage proprement dit.

## **Sécurité et efficacité**

Le verre est un matériau lourd, coupant et fragile. Une échelle est haute et n'est pas stable. Les profils en aluminium sont souvent longs et tranchants. Prenez donc les précautions nécessaires, surtout si vous n'êtes pas habitué à ce genre de travail. Gardez les enfants à distance. Des chaussures, des lunettes et des gants de sécurité sont utiles et, pendant le montage du vitrage, indispensables.

## **Outils:**

- 2 clés avec écartement de 10mm
- un couteau ou des ciseaux solides
- un tournevis Philips (grand)
- un tournevis pour vis à fente (grand)
- un niveau à bulle
- une bêche
- une corde ou un mètre d'au moins 5 m
- une échelle (double)

## **Accessoires en vente dans tout magasin de bricolage:**

- silicones neutres, incolores
- béton à prise rapide, pour l'ancrage de votre serre

## **Bon à savoir**

- Les encoches pour boulons sont des encoches ajustées aux têtes des boulons qui y seront fixés. Pratiquement tous les profils de cette serre sont pourvus d'une ou plusieurs encoches pour boulons.
- Pour les raccordements avec encoches pour boulons, veuillez toujours à bien presser les profils les uns contre les autres.
- Les boulons d'attente sont les boulons à introduire dans l'encoche pour préparer le montage ultérieur; ils sont provisoirement tenus en place par des écrous, à une dizaine de centimètres du bout des profils.
- La serre est composée de 2 façades, de 2 parois latérales et de 1 toit.
- Sauf indiqué autrement, on utilise des boulons courts (M6x10).

## **Conseil**

Servez-vous toujours de **tous** les détails agrandis pour aligner, centrer et positionner les profils. Faites attention à la section et aux trous. Vissez les écrous à 2 tours seulement sur les boulons, et attendez d'avoir parcouru la page **jusqu'au bout** avant de serrer les boulons et les écrous définitivement.

## **Dear Customer**

Congratulations on the purchase of your greenhouse. Thanks to this manual, no technical foreknowledge is required for assembling the greenhouse. Reading through the manual step by step will allow you to prepare all necessary parts and acts for the assembly of your greenhouse.

## **Safety and Efficiency**

Glass is heavy, sharp-edged and fragile. A ladder is high and unstable. Aluminium profiles are sometimes long and sharp-edged. So, be careful when you are not familiar with handling these materials. Therefore, it is better to keep children away during the assembly. Safety shoes, safety glasses and safety gloves may therefore be very useful and are essential when assembling glass.

### **Tools:**

- 2x 10mm screw-wrenches
- Knife or solid scissors
- Star screwdriver (large type)
- Flat screw-driver (large type)
- Spirit level
- Shovel
- Rope or measuring rod min. 7 meters
- Ladder (self-standing)

### **Tools available in all D.I.Y.-shops:**

- Colourless neutral silicone kit
- Quick-drying concrete to solidly anchor your greenhouse

## **Petty Facts**

- Bolt slots are slots in which fits a bolt head. Nearly all profiles in this greenhouse have 1 or more bolt slots.
- In the event of bolt slot connections, always make sure that the profiles are closely pressed to one another.
- Stop bolts are bolts that we slide in a slot in preparation of further assembly; these bolts are temporarily retained by nuts at some 10cm of the profile end.
- A greenhouse consists of 2 façades (front and back), 2 sidewalls and a roof.
- Except when explicitly mentioned otherwise, short bolts (M6X10) are used.

## **Advice**

Always use **ALL** detailed views as aid to align, line up and position your profile. Pay attention to section and perforations. When fixing the nuts on the bolts, only make 2 turns; only definitively tighten the bolts and nuts **after** having gone through the **entire** page.

## **Sehr geehrter Kunde!**

Herzlichen Glückwunsch zu Ihrem neuen Gewächshaus! Diese Anleitung setzt keine technischen Vorkenntnisse voraus. Gehen Sie alles Schritt für Schritt durch, damit alle erforderlichen Teile in Reichweite liegen und Sie auf den nächsten Arbeitsschritt vorbereitet sind.

### **Sicherheit und Effizienz**

Glas ist schwer, scharfkantig und zerbrechlich. Eine Leiter ist hoch und wacklig. Aluprofile sind manchmal lang und ebenfalls scharfkantig. Seien Sie vorsichtig, wenn Sie nicht täglich mit solchen Dingen arbeiten. Kinder sollten auf Abstand bleiben.

Sicherheitsschuhe, eine Schutzbrille und Handschuhe können hilfreich sein. Beim Einsetzen von Glas sind sie sogar unverzichtbar.

Arbeitsmittel:

- 2 Schlüssel mit 10 mm Schlüsselweite
  - ein Messer oder eine robuste Schere
  - Kreuzschraubendreher (gross)
  - Schlitzschraubendreher (gross)
- Zubehör, das Sie in jedem Baumarkt finden:
- farbloses, neutrales Silikon
  - schnellhärtender Beton für die Verankerung Ihres Gewächshauses

### **Wissenswertes**

- Schraubennuten sind Nuten, in die der Kopf einer Schraube passt. Nahezu jedes Profil dieses Gewächshauses hat 1 oder mehrere Schraubennuten.
- Bei Nutverbindungen müssen die Profile immer fest aneinander gedrückt werden.
- Warteschrauben sind Schrauben, die man zur Vorbereitung der späteren Montage in eine Nut schiebt. Sie werden in etwa 10 cm Abstand zum Profilende provisorisch durch Muttern festgehalten.
- Das Gewächshaus besteht aus 2 Giebelwänden, 2 Seitenwänden und 1 Dach.
- Soweit dies nicht anders angegeben ist, werden stets kurze Schrauben (M6x10) verwendet.

### **Tipp**

Benutzen Sie immer **alle** Detailansichten als Hilfsmittel für die Fluchtung, Ausrichtung und Positionierung der Profile. Beachten Sie den Querschnitt und die Bohrungen.  
Die Muttern dürfen nur zwei Umdrehungen weit auf die Schrauben gedreht werden. Erst **nachdem** die **ganze** Seite mit Schrauben bestückt ist, werden alle Schrauben und Muttern endgültig festgezogen.

F:

**Ouvrez toutes les boîtes et assurez-vous que le contenu est correct.**

Triez toutes les parties conformément à l'utilisation indiquée sur le contenu des boîtes.

Les 7 types d'utilisation sont :

- Façade
- Parois
- Toit
- Porte
- Lucarne
- Vitrage
- Finition

NL:

**Open alle dozen en controleer of de inhoud klopt.**

Sorteer dan alle onderdelen volgens gebruik, die vermeld staat op de inhoud in de dozen.

De 7 soorten van gebruik zijn :

- Gevel
- Zijwand
- Dak
- Deur
- Dakraam
- Beglazing
- Afwerking

E:

**Open all the boxes and make sure the contents is correct.**

Sort all parts according to the usage which is mentioned on the contents of the boxes.

The 7 types of usage are :

- Facade
- side panel
- Roof
- Door
- Skylight
- Glazing
- Finishing

D:

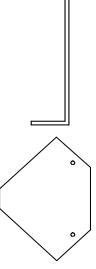

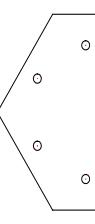

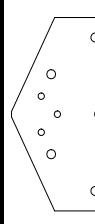

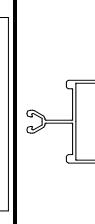

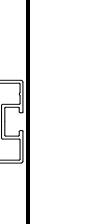

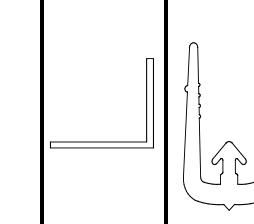

**Öffnen Sie alle Boxen und kontrollieren Sie dass der Inhalt richtig ist.**

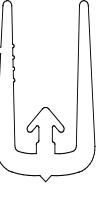

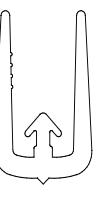

Sortieren Sie alle Teile nach der Anwendung, die auf dem Inhalt der Boxen angegeben wird.

Die 7 Arten der Anwendung sind :

- Fassade
- Seitenwand
- Dach
- Tür
- Dachfenster
- Verglasung
- Finishing

NL : Geliieve te monteren met beide hoekpunten van de hoekprofielen tegen elkaar.

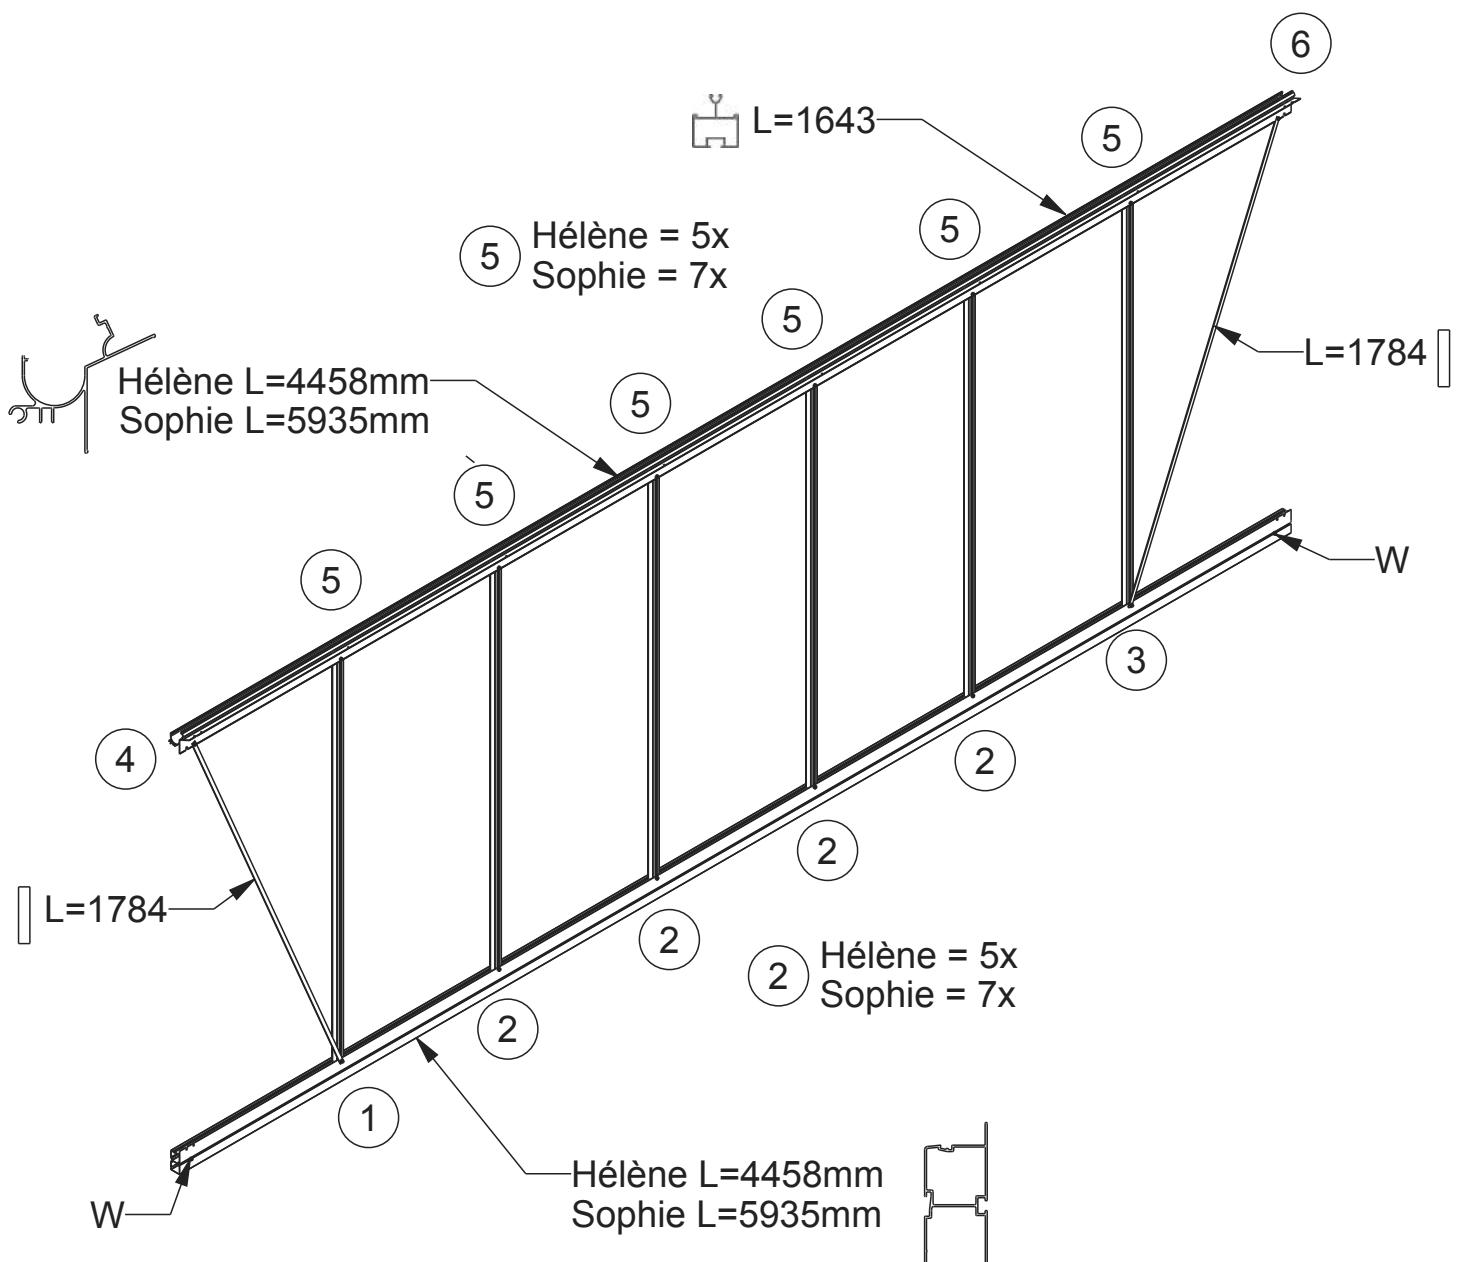

Dit is belangrijk voor de montage van de driehoeksruit EA zie pag 28

F : Assemblez les deux sommets des angles des cornières l'un à l'autre.  
C'est important pour le montage des vitres triangulaires EA, voir le pag 28.

E : Mount the two angular points of the angle sections against each other.  
It's important see page 28, to mount the windows EA.

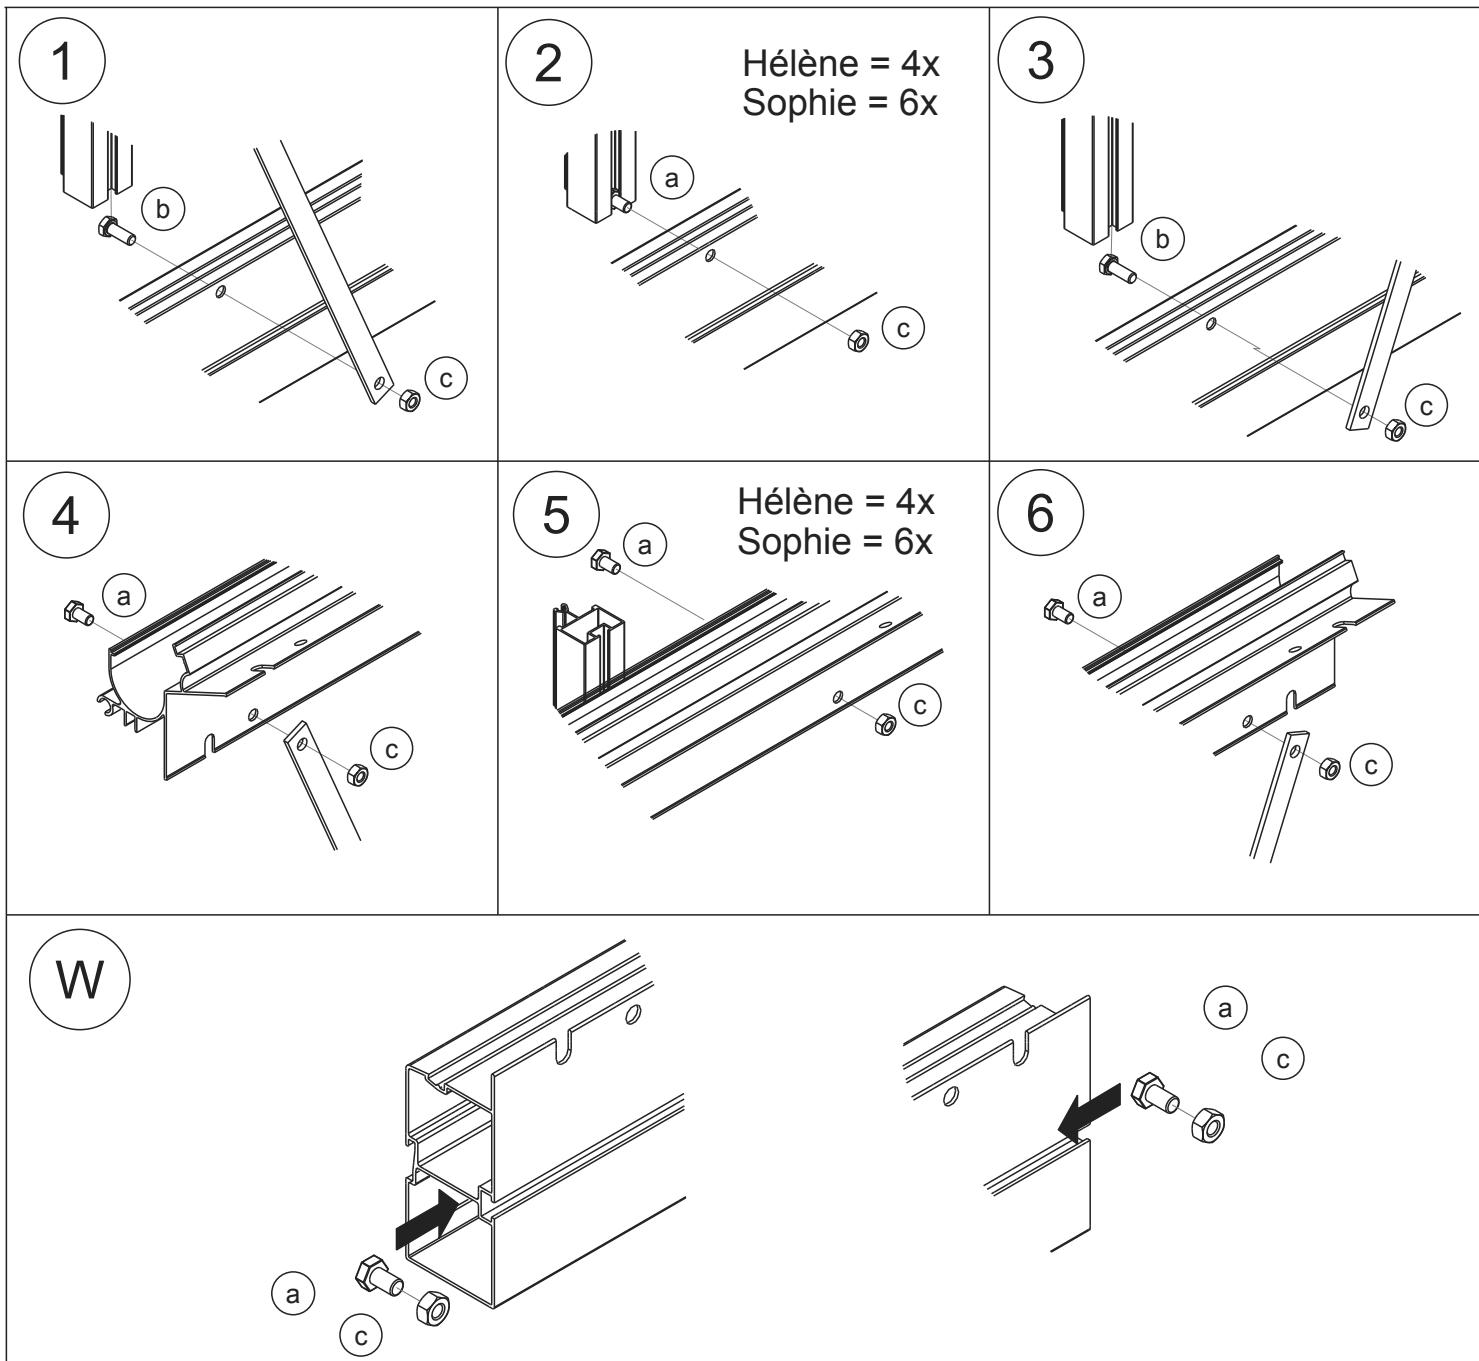

D : Montieren Sie die zwei Scheitelpunkte der Winkel zueinander.  
Wichtig für die Befestigung des Dreieckfenstern. Siehe Seite 28.
