

Zinc Plated Steel

Standard zinc plated screws, washers, bolts, and nuts are hardware that have been plated in zinc. The zinc corrodes at a slower rate than the steel, so it is rust resistant.

 Besides the beautiful look the zinc plated hardware adds to products, it also has more practical benefits as well:

- Alkaline zinc-nickel plating was found to be the most salt-spray resistant of the several non-cadmium platings tested.
- Alkaline zinc-nickel plating provides equal or better corrosion resistance as cadmium plating.
