

## Body Wrap Instructions

Healers Body Wraps are a module design. Each Piece is separate and hooks together using the Velcro tabs. This allows for maximum flexibility. See the below chart. Loop fabric allows for Velcro to attach anywhere for snug adjustable fit.

The front module hooks together first at the shoulders, then wraps around torso and attaches at the upper body.

Rear module –( diaper) wraps around on the rear of the pet and again hooks on the upper torso.

Both Pieces connect together to cover the entire torso using the flaps on the rear module. Just unfold the tabs and hook to the front module. This secures the two pieces together.

Front and rear module sold separately.
