

# STAINLESS STEEL LOW-VIS 19MM NETTING

A revolutionary advance in cat enclosure netting, Catnet Premium is an advanced blend of netting and stainless steel. Whilst still maintaining the many advantages of working with a netting product, Catnet Premium ensures added strength and durability. Although not specifically required for day to day residential enclosures, this unique "one of a kind" product is a premium option for:

- ☒ High traffic and commercial enclosures
- ☒ Added protection from animals external to the enclosure

A product of this design has never been previously seen in Australia, and is a step forward in the design of cat enclosure materials. Catnets premium offers:

- ☒ The strength of stainless steel at a netting price
- ☒ 9 strands of Netting & 1 Strand of Stainless Steel
- ☒ It is easy to work with and won't require any specialist tools
- ☒ Just as low-vis as our 19mm Low-Vis net
- ☒ UV treated 0.2%
- ☒ Pre-Stretched to tension
- ☒ Heat strengthened knots
- ☒ Transparency 86%

## Available in widths of:

- 1.8m - Available in Black
- 3m - Available in Black
- 5m - Available in Black

## Bulk Rolls available in:

- 1.2m x 25m
- 1.8m x 75m
- 10m x 10m
- 3m x 100m
- 5m x 100m
- 50m x 10m

## Our netting manufacturer is certified to:

## Our netting is the chosen product of over 25 installers & resellers throughout Australia & N.Z

# UV TEST RESULTS

## Netting Specification:

500Denier / 9ply HDPE  
Black Colour  
Mesh Size: 19mm x 19mm

## Testing Method:

QUV ACCELERATED WEATHERING TESTER  
IS 16008:Part2

## Results:

- ☞ 3 years Equivalent to outdoor Exposure: 98% Strength maintained (2% loss)
- ☞ 5 years Equivalent to outdoor Exposure: 96% Strength maintained (3.3% loss)
- ☞ 10 years Equivalent to outdoor Exposure: 93% Strength maintained (6.6% loss)

## Notes on UV testing

The QUV accelerated weathering tester reproduces the damage caused by sunlight, rain and dew. In a short period of time, the QUV UV tester can reproduce the damage that occurs over months or years outdoors. To simulate outdoor weathering, the QUV accelerated tester exposes materials to alternating cycles of UV light and moisture at controlled, elevated temperatures. It simulates the effects of sunlight using special fluorescent UV lamps. It simulates dew and rain with condensing humidity and/or water spray. With thousands of testers in use worldwide, it is the world's most widely used weathering tester. UV light is responsible for almost all photodegradation of durable materials exposed outdoors. The QUV tester's fluorescent lamps simulate the critical short-wave UV and realistically reproduce the physical property damage caused by sunlight. Types of damage include color change, gloss loss, chalking, cracking, crazing, hazing, blistering, embrittlement, strength loss and oxidation.
