

Aluminium Crimps and Crimping Pliers

Crimps are used for larger enclosures, and also by professional installers as an alternative (to using wire rope grips) to terminate wire runs. The benefit of using this method is that it works out more economical over a large number of runs, and they are also quicker to install.

To use the crimping method you will require a pair of our Crimping Pliers. The crimping pliers secure the Crimp permanently in position.

These pliers have a dedicated Wire-Rope cutting blade. Using this tool makes cutting our Wire-Rope easy, and ensures a clean cut every time. It can cut up to 3mm Stainless wire effortlessly.

The Aluminium crimps are a very neat and tidy way to finish off a run of wire, and also add a professional touch to DIY Cat Enclosures.
