

Ultra Portable Freestanding Cat Enclosure

With thousands of enclosures sold throughout Australia and the world, Catnets has established itself as a main supplier and primary innovator in the cat containment industry. Based on customer feedback and extensive product testing, we've spent the previous 3 years developing a freestanding enclosure that satisfied customer's four main requirements: Our customers have noted that a freestanding cat enclosure must be:

- ☒ Safe and comfortable for my cat(s)
- ☒ Strong and Sturdy
- ☒ Must be COMPLETELY portable and easy to assemble (AND DISASSEMBLE)
- ☒ Must be affordable for all cat owners

Being sturdy and yet completely portable, the cat 1.8 is ideal for permanent home use as well as being an ideal option for:

- ☒ Cat owners who are renting or moving often
- ☒ Campers and travellers who are looking for a compact, light-weight & completely portable option.
- ☒ Commercial vet/cattery/rescue home/pet stores etc.

Although overall weight is of concern, a cat enclosure MUST still be sturdy and be able to withstand the elements. We have incorporated a strong, light weight POWDERCOATED steel frame, with purpose moulded SUPER STRONG STEEL CORNER CONNECTORS. As netted enclosures are generally top heavy by design, light weight plastic corner connectors just aren't suitable and safe as a design option. Even with the steel frame, and heavy duty moulded connectors, this enclosure weighs in at only 20kg, so it can still easily be moved around the yard when required.

The included cat hammock is not made of your usual shade cloth. It is manufactured using a heavy Duty vinyl coated polyester woven fibre mesh that is 20 times stronger than fibreglass mesh. It has quality edging and is super simple to attach in minutes. You can add more hammocks as required.

With netting supplied for well over a thousand individual enclosures each year, as well as being the wholesale supplier to over 25 Cat Net Installers and Resellers throughout Australia & New Zealand, Catnets is confident in providing only the best quality netting. Our netting is pre-stretched to tension, is Heat set during manufacture and is of course UV Treated. The Cat-1.8 featuring our premium 19mm netting, has the highest quality finishes such as:

- ⌄ ALL professionally Overlocked and stitched 6mm rope reinforced edges.
- ⌄ A heavy duty 18 ounce Black PVC webbing border along the base of the enclosure. The base framework is passed within the webbing to ensure no gaps whatsoever between frame and net.
- ⌄ UV Treated, superior quality outdoor Velcro attachments for securing the net to the upper and side frame.

The first thing you'll notice when you first see the cat-1.8 is that the net is suspended inwards of the steel frame. There are several benefits of designing it in this manner.

- ⌄ Being manufactured as a 1 piece net there are no customer joins required which can potentially create weak points in the enclosure
- ⌄ It allows the net to be pulled out towards the frame until the correct amount of tension is obtained. Having the net tight is of the utmost importance to your cat's safety, and installing it in this manner ENSURES a tight net. With "slip over the top" type nets, this same type of tension can't be replicated. Being designed in this way, there are NO permanent attachments such as clips or cable ties.
- ⌄ The enclosure can therefore easily be disassembled and reassembled as many times as you like in a short amount of time

We are currently also including a triangular shade sail to further enhance the comfort and aesthetics of the enclosure.

A heavy duty vertical zipper entry allows access to the enclosure.
