- ☒ 19mm UV Treated Cat Netting
- ☒ Net reinforced webbing edges
- ☒ Pre-Sewn Heavy Duty 10mm Zipper
- ☒ Full Instructions for assembly
- ☒ Weight Approx.: 32kg

Our Classic range of freestanding cat enclosures are made of Sturdy Powder coated Steel, with heavy duty moulded steel reinforced corner connectors, and Extra-Tough UV stabilised and Professionally Edged 19mm netting. This makes them ideal for indoors or for outdoor verandahs or backyards.

With thousands of enclosures sold throughout Australia and the world, Catnets has established itself as a main supplier and primary innovator in the cat containment industry. Based on customer feedback and extensive product testing, we've spent the previous 3 years developing freestanding enclosures that satisfied customers 3 main requirements: Our customers have noted that a freestanding cat enclosure must be:

- ☒ Safe and comfortable for my cat(s)
- ☒ Strong and Sturdy
- ☒ Must be affordable for all cat owners

Being made of a sturdy design, our Classic Range Enclosures are ideal for permanent home use as well as being an ideal option for:

- ☒ Cat owners who are renting or moving often
- ☒ Commercial vet/cattery/rescue home/pet stores etc.

Although overall weight is of concern, a cat enclosure MUST still be sturdy and be able to withstand the elements. We have incorporated a strong, light weight steel frame, with purpose moulded SUPER STRONG STEEL CORNER CONNECTORS. As netted enclosures are generally top heavy by design, light weight plastic corner connectors just aren't suitable and safe as a design option.

With netting supplied for well over a thousand individual enclosures each year, as well as being the wholesale supplier to over 25 Cat Net Installers and Resellers throughout Australia & New Zealand, Catnets is confident in providing only the best quality netting. Our netting is pre-stretched to tension, is Heat set during manufacture and is of course UV Treated.

The included cat hammock is not made of your usual shade cloth. It is manufactured using a heavy Duty vinyl coated polyester woven fibre mesh that is 20 times stronger than fibreglass mesh. It has quality edging and is super simple to attach in minutes. You can add more hammocks as required.

We are currently also including a triangular shade sail to further enhance the comfort and aesthetics of the enclosure.

They are pre-fitted with a heavy duty, double sided 10mm NET zipper for entry and exit.

Advantages of a cat enclosure include:

- ☞ Safe and cost effective method of allowing your cat some outdoor time
- ☞ Light weight - can be moved quite easily from one area to another.
- ☞ Suited for balconies where strata laws forbid complete net enclosure
- ☞ All components are UV treated and suitable for outdoor usage
- ☞ Moulded FULL STEEL corner connectors for superior strength

Our netting manufacturer is certified to:
