

HIGH SECURITY PROXIMITY FOB

Reference: ACC-D23361

SUMMARY

Our high security range of proximity readers and fobs use Triple DES (3DES) and AES encryption, the same level of encryption used and approved by organisations such as the US Department of Commerce National Institute of Standards and Technology (NIST) for the protection of sensitive and confidential data.

If you have concerns with your current access control proximity fobs/cards being cloned or copied, our high security range can eliminate these security threats.

High security upgrades can often occur with minimum capital expenditure and retaining existing head end equipment.

FEATURES
