

PRODUCT DATA

DISHCHLOR TECH

2 in 1

**Heavy Duty
Machine Dish Washing Detergent
Low Temp - Chlorinated**

A premium product formulated for use in low temperature dish washing machines using automatic detergent feeding systems. Designed for use in all water conditions.

Directions: Pre scrape all dishes of excess food and soils before racking. This prevents food particles from entering the wash tank, which generally causes excess foaming.

For low temperature ware washing meter detergent at 2 ml to 2.5 ml per litre of wash water. Follow with a sanitizing rinse. Maintain a minimum chlorine level of 50 ppm in the rinse water. Check with the Health Dept. for local legislation.
