

PRODUCT DATA

NOVA TEK

Non Acid

Descaler and Deliming Agent Safe Replacement for Sulfamic, Phosphoric and other Organic Acids

- **Non Acid Nova Tek** represents a phosphate free descaling agent with significant safety, handling, labeling and shipping advantages over traditional acids. It does not generate the fumes and other hazards associated with traditional acid cleaning.
- **Nova Tek** provides faster solubilization of calcium carbonate, than any other acid tested with the exception of Hydrochloric Acid. It may be used as a safe replacement for Hydrochloric Acid for pH adjustment.
- **Nova Tek** cleans masonry and helps remove excess mortar, plaster and efflorescence from brick work and ceramic tile.
- **Nova Tek** may be used in cleaning boilers, cooling towers, evaporative condensers, heat exchangers, steam coils, holding tanks, and any other system where hard water scale can be a problem.

Directions: Use a dilution of 1 part **Nova Tek** with up to 20 parts water, depending on severity of scale buildup. Use of heat (50 deg. C to 70 deg. C) will help accelerate scale removal. If used in food processing equipment, ensure a proper potable water rinse to remove all traces of **Nova Tek**.
