

PRODUCT DATA

STEAM EXTRACT

Carpet Extraction Cleaner

A heavy duty cleaner, for use in hot water extraction equipment. Because of the short contact time, with the carpet, **STEAM EXTRACT**, is extremely fast acting and is an excellent water soluble solvent. Carpets are left completely clean and bright.

- **FAST ACTING**
- **HIGHLY CONCENTRATED**
- **LOW SUDSING**

Directions: First dry vacuum, to remove loose soil and surface dirt.

For Hot Water Extraction: Use 1 to 2 ounces (30 - 60 ml) per gallon (4.54 litres) of water in the solution make-up tank. 3 ounces (90 ml) per gallon (4.54 litres) may be required on heavily soiled carpets.

In Traffic Lanes: Dilute 1 part of cleaner with 8 parts water. Spray a fine mist over traffic lanes, prior to cleaning with extractor as per above. For badly stained traffic lanes, **STAIN OUT** may be used.

Mop-on Carpet Cleaning: Dip mop or sponge in a solution of 1 part **STEAM EXTRACT** and 8 parts water. Using a damp mop only (never dripping wet), lightly brush away spots and soils.

For Spray Pad or Bonnet Cleaning: Use 1 part of **STEAM EXTRACT** with 8 parts water. First spray a fine mist over small area. Use a rotary machine with a lightly dampened pad or bonnet (using the same solution). Then clean the area by lightly "buffing" the carpet.

CAUTION: Overwetting of carpet may cause shrinking and browning. Because the manufacturer cannot control application, no guarantee can be implied or expressed. Use **EXTREME CAUTION** on wool. Because of varying degrees of colour fastness, testing in an inconspicuous place is suggested.
