

PRODUCT DATA

RINSE

MACHINE RINSE ADDITIVE

RINSE provides a fast sheeting action with little or no foam to prevent spotting and filming of dishes, glasses and flatware.

RINSE, is formulated to be compatible with all ware washing detergents, including alkaline and chlorinated formulations.

Directions: For better cleaning always scrape off excess food soil and other particles, before racking dishes. This will help prevent their entry into the wash tank which otherwise would cause foaming and prevent good cleaning. Rinse with moderately warm or hot water.

Meter **RINSE** generally at 100 ppm for most applications. Temperature should be maintained at 80 °C (180°F) or higher to prevent foaming. Do not overuse - proper dilution will provide excellent results.

Check with your local health authorities for mandatory sanitizing requirements.

**Refer to the Material Safety Data Sheet for safety information.
FOR INDUSTRIAL and INSTITUTIONAL USE ONLY.**
