

Use of MSB with Animals, Fish and Birds

Is MSB safe for use with our furry friends?

Over the years, we have had many reports of:

- MSB being used in fish tanks and fish ponds
- MSB being used in bird baths
- MSB being used by farmers in drinking watering troughs
- MSB being used by pet owners in their pets drinking water

Customers claim that MSB helps to reduce the algae growth that occurs in fish tanks, ponds and bird baths, keeping them cleaner longer. Farmers claim that it reduces distemper and other diseases. They claim that the flies that carry these diseases won't lay eggs on the water if it is blued. Farmers also use it to prevent disease in young chicks. Dog-owners have used MSB to prevent kennel cough and other diseases as well as to keep the noses of their white show dogs from yellowing. Many veterinarians recommend it to their clients. It is put directly on sores, insect bites, ring-worm, etc.

Not one negative report since 1883:

Since 1883, the year MSB was born, we have never received a report of a sick or dying animal as a result of using MSB with animals, fish or birds.

However, we must emphasize, as stated in our disclaimer below, that since we have not tested MSB for any such use, and because it is manufactured under non-sterile conditions, we cannot recommend it for ingestion. You are "at your own risk" in using it in this way.

Disclaimer:

MSB is manufactured and tested as a laundry whitener only. All other uses are "at your own risk". While we advertise MSB for some other uses, we try to remain clear that these other uses come to us from loyal customers and we pass the information on as a public service.
