Water Walkers and Vet Boxes

From: Darren Dance
Company: Australian Thoroughbred Bloodstock
Re: Andromeda Splitbelt

My experience in dealing with Andromeda and their product Splitbelt has been very good. The quality was consistent and suitable for use in my stables and yards. In addition the level of assistance from the sales team was excellent and I highly recommend Splitbelt from Andromeda Industries for all industries requiring quality reused rubber.

Arenas, Float Tail Gate Mats, Wall Lining and Washbays

SPLITBELT: Standard Grade

Description:

This is our normal Splitbelt as supplied for **stockyards and general agricultural uses**. Some variations of thickness can occur as well as areas of exposed canvas. Neither of these detracts from its durability and strength. Any major variations will be described and discounted for at the time of ordering.

Notes:

1. This is our master list for use by Andromeda Staff in setting prices for Splitbelt products. Not all sizes will be available at any time, although we attempt to keep most sizes on hand most of the time.
2. Splitbelt is processed from disused conveyor belting. Variations of quality, thickness and colour can occur. Most belt comes from coal mines, and some coal dust can be present on the surface, but this washes off easily.
3. Basic units for calculation of weight = 1.5 kg/m² per mm thickness.
4. Prices exclude freight charges.

Tailgate Mats come with built-in Rubber Moulded Cleats across the width of the mat and grip grooves in between the Cleats. These Tailgate Mats come in 4 different sizes to suit Horse Floats, Goosenecks and Trucks, both rear ramp and side slide out ramp. Easy to install and are durable and strong having canvas ply throughout the rubber which increases product longevity.

Description:

This premium quality product is used for more demanding applications such as **flooring for people or animals**. It is specially selected during the processing operations for flatness and even thickness. This makes it suitable for structures where appearance is important. It is also processed further into Holeybelt for utes and horse floats. Splitbelt thicker than shown is available at times and is excellent as mats at machines and work stations.

Notes:

1. This is our master list for use by Andromeda Staff in setting prices for Splitbelt products. Not all sizes will be available at any time, although we attempt to keep most sizes on hand most of the time.
2. Splitbelt is processed from disused conveyor belting. Variations of quality, thickness and colour can occur. Most belt comes from coal mines, and some coal dust can be present on the surface, but this washes off easily.
3. Basic units for calculation of weight = 1.5 kg/m² per mm thickness.
4. Prices exclude freight charges.

Rubber Fence Rails

[Web link](#)

From: Emma Elkins
Company: NCAS Lvl 1 Coach & Dressage Coach
Re: Andromeda Rubber Rails

My new Menlo Park dressage arena is used to teach and train riders and horses that are aspiring to Olympic standards, and those who ride for pleasure. Naturally I want my arena to present a professional appearance to both existing and potential clients. My choice of Andromeda Rubber Rails has given my arena a very neat and simple, but attractive appearance. I especially feel it is a safe environment for young horses and inexperienced riders to work in. The fence was quick and economical to install and I am very pleased with it as are all others who have seen it and ridden in the arena. I would recommend the Andromeda Rubber Rails to anybody who wants a neat and simple, economical and safe yard.

RUBBER RAILS: Grade A

PRICE LIST

Width (mm)	Thickness 10 – 12mm		
	Weight	Price	Strength
100	1.2 - 1.5 kg/m	\$5.50/m	Strength 3,000 kg +

Description:

Rubber rails are produced in rolls of 30 to 50 metres long. They are sold in rolls as produced with no cut lengths. Stock levels vary depending upon availability of suitable used belt.

Notes:

1. If planning a yard, please phone for current stock levels while in design stages.
2. Other sizes are available on request.
3. Prices exclude freight charges.

Installation tips:

- The simplest way to install Rubber Rails is to use Tek screws, or bugle head screws (for a flat finish) into either steel or wood posts. The rail is pulled tight like a wire and made fast, usually on the inside of the yard. Steel "U" spikes can also be used, straddling the rubber rail.
- Another way of fixing is to twitch them on with fencing wire and a Cobb & Co hitch. This can be easily changed later if needed.
- They can also be painted a bright colour if required. Consult the paint specialists to select a suitable paint for a durable finish.

STABLE FLOOR TILES: 1 metre X 1 metre X 25mm

Andromeda Stable Floor Tiles are a useful product to save on time and money with only half the amount of bedding required in your stable and easy cleaning everyday. Ideal for injured horses on stable rest for long periods of time. They are also very economical being priced at \$50 per tile gst inclusive, only a fraction of the cost of other comparable products.

HOLEYBELT

5–13mm thick & 600-1700mm wide

[Web link](#)

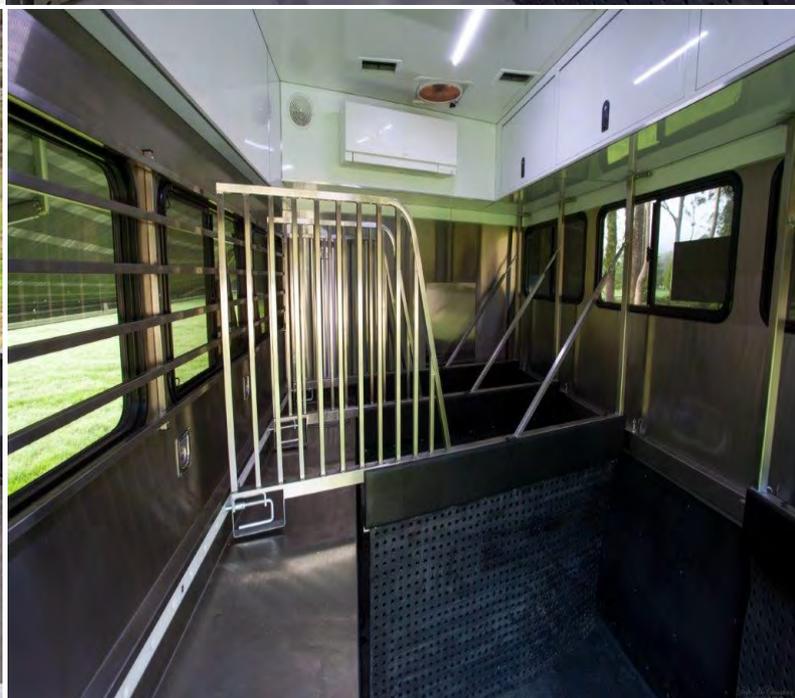

From: Steffen Andersen
Re: Andromeda Holeybelt and Splitbelt

I have repaired trailers for 32 years with well-known companies. Working mostly on custom trailers Andromeda's Holeybelt is the best rubber for horse transport dividers being lighter and allowing more air flow than solid rubber. Andromeda's Splitbelt for round yards and stables well known for consistent quality and both products are stronger than others and less likely to tear due to the internal canvas reinforcement.

Ute Tray Mats

Holeybelt (20mm and 40mm holes)

Horse Float Dividers

HOLEYBELT 20 Grade 'A'

Description:

Splitbelt with 20mm holes.

Notes:

1. Standard Holeybelt Grade 'A' is made from first grade Splitbelt, which is made by splitting disused conveyor belts. It usually comprises one or two plies of canvas of EP 200 (or higher) rating. Variation of thickness may occur in this product. Textured surface one side.
2. Prices exclude freight charges.
