

ANDROMEDA HOLEYBELT 20

What is Rubber Holeybelt 20

Rubber Holeybelt 20 is a heavy duty, strong, rubber/canvas sheet with a textured skid resistance surface processed from disused conveyor belt. It has 20mm holes punched across the width and length of the belt at 45mm centres. The thickness can range from 4mm to 12mm. Holeybelt is a reused industrial product which helps to minimise environmental impact in land fill sites.

What it does:

Holeybelt 20 provides a permanent skid resistant surface as well as allowing water to pass through. This means that the surface of the belt is less slippery and with aeration the floor gets the opportunity to dry out. Used at work stations it can reduce stress where long standing is required and in walkways the native grass can grow through the mat to give an all-weather access.

Ute Matting

Rubber Holeybelt 20 is the ideal protective layer for the back of your utility, truck or horse float. Its strength and slip resistant properties make it the perfect addition to your work vehicle.

Dividers – Horse Floats

Holeybelt 20 recently has been used as horse float dividers to stop horses inflicting injury. It promotes air movement and reduce weight on the partition bars.

Cricket Net Protection

Holeybelt protects chain netting from impact by cricket balls, also saves the wear and tear on the balls. It promotes airflow to help reduce temperature on hot days.

Show Matting

Holeybelt is a safe and convenient way to present stud stock at shows. Helps reduce cleaning and maintenance of the cattle before judging. Supplied in any length and up to 1600mm wide its easily rolled up and stored for the next show.

Stable Matting

Holeybelt 20 is ideal floor covering on top of concrete or hard floor stables. It protects the hoofs when horses continually paw at the floor. Secondly it allows for liquids to move to lower surface and drain away. It also reduces the amount of bedding that would normally be required, which is a cost saving.

Beach Access

Holeybelt 20 can be used for pedestrian or light vehicle access onto beaches or sandy areas. Ideal for running to the water's edge in order to launch boats. Great to use when surf carnivals are on for lifeguards and medical staff to access the beach.

Erosion Control

Holeybelt 20 in conjunction with Envirobelt 40 is ideal to use on roadways into properties where some erosion control measures are required. Once pinned down and secure, it allows native grasses to grow through and form a permanent road base for all weather access.
