

The Essence of Plaque Control from a Clinical and Scientific Perspective - Part I and II

Duration: 40 minutes

Presenter: Dr. Michaela von Geijer

The lecture will be focusing on the benefits and importance of good plaque control, especially interdental cleaning – from the patient's point of view but also from a professional perspective. A short review of existing scientific evidence will be brought to you, particularly focusing on the evidence that highlights the use of interdental brushes. The presentation will also incorporate clinical tips. Many different cleaning aids are available and for the patients to know what to use and how to use the devices seem to be nearly as important as motivation. TePe's product portfolio will be integrated within the lecture.

Healthy Implants – the Importance of Maintenance and Good Plaque Control - Part I and II

Duration: 40 minutes

Presenter: Dr. Michaela von Geijer

The lecture will be focusing on the benefits and importance of good plaque control, especially interdental cleaning – from the patient's point of view but also from a professional perspective. Periodontal Diagnosis – An Update

Duration: 40 minutes

Presenter: Dr. Sanjay Haryana

Over the years, we keep learning more about periodontitis – through research and practical experience. Periodontitis itself never changes but our knowledge does and therefore we have to adapt how we diagnose and describe the disease. The new classifications from 2017 replaces the 1999 classification. Get an overview of the new classifications, see practical examples and see how different countries adapt the system to fit their needs.

Periodontal Health & General Health – An Update - Part I and II

Duration: 40 minutes

Presenter: Dr. Michaela von Geijer

The scientific publications concerning the possible links between periodontitis and systemic diseases are comprehensive. This presentation will summarize the current available knowledge, focusing mainly on cardiovascular diseases and diabetes and their association with periodontal health and disease. The question however this knowledge has changed the way we treat our patients will also be reviewed.

Communication, the Foundation for Compliance

Duration: 40 minutes

Presenter: Lina Gassner Kanters, Dental Hygienist

Daily oral hygiene measures at home play a vital role in prevention of periodontal diseases. From research we know that a considerable proportion of the patients are not following the advices given to them and also seem to lack knowledge concerning the aetiology and prevention of periodontal diseases. So how can we as professions better educate and inform our patients? The presentation will give clinical advices, based on science, on how to improve compliance from the patient.

Implant Maintenance – the Foundation for Long-term Success

Duration: 90 minutes

Presenter: Dr. Michaela von Geijer

As dental professionals most of us meet patients with dental implants daily. For the patient implant treatment may seem like an easy solution but we know that peri-implant diseases are a prevalent problem. To take proper care of the implants, daily good oral hygiene is fundamental. The lecture will be based on scientific out-comes, but also provide hands-on tips and actions on how to improve oral health of implant patients.

From Loe to Kotsakis – Easily Digested Science about Gingivitis, Periodontitis, Interdental Cleaning and Oral Health

Duration: 90 minutes

Presenter: Dr. Michaela von Geijer

The clinical manifestations of periodontal disease have been noted for thousands of years. But little was known about cause and effect, and theories were often subjective or superstitious. Then in 1965, came Loe. For 55 years we have known that gingivitis and periodontitis are initiated by microorganisms and that plaque control is how we prevent these diseases. We'll take a look at some of the research published since 1965, with a special focus on interdental cleaning.
