

# Penrose Patch Notes

## 2020.12.09 - v.0.1.5:

- Fixed a bug causing background noise at low volume levels.
- Mic clarity improvement in wireless mode.
- Lowered noise floor.
- Adds support for five EQ Presets, including save and load features.
- Lowered voice cue volume (power on, power off, etc.)

## 2021.4.28 - v0.1.10:

- Makes several improvements to the mic quality and clarity over wireless.
- Adds an on-the-fly sidetone on/off functionality to the headphones by pressing in and holding the mic wheel for ~3 seconds (with voice cues)
- Adds an on-the-fly EQ preset toggle that will cycle through the 5 presets in memory by holding in the volume wheel for ~3 seconds (with voice cues)
- Adds a volume mix function for simultaneous BT/wireless connections. This can be used to adjust the relative levels on the fly while in Bluetooth mode by performing a "click and scroll" of the headphone volume wheel (click in once and then scroll up or down to your preferred mix).
- Fixes a bug that caused the low battery warning to trigger too early.

## 2021.12.13 - v0.1.12:

- Added a Bluetooth only mode for when a simultaneous Bluetooth/2.4 connection is not wanted.
- Removed subsequent voice cues after losing connection to wireless dongle.
- Various bug fixes
