Description

The Image Intensifier Assembly, 18 millimetres microchannel wafer, shall have a minimum useful photocathode and phosphor screen diameter of 17.5 millimeters (mm). The assembly shall employ a microchannel electron multiplier plate with proximity focus on the input and output. The assembly shall include the high voltage multiplier and oscillator and shall be encapsulated within a hard surface insulating sleeve or boot and assembled in a hard plastic housing. The tube is equipped with **AUTO-GATING**

Phosphor : P22

Input window : Glass

Output window : Non-inverting fibre-optic

Construction

The assembly shall be fabricated in accordance with the applicable drawing.
