

DYE SUBLIMATED PBT KEYCAPS

Manufacturing Standards

The following are items that fall within our normal manufacturing standards, and are to be expected with the purchase of this product.

Quality Control

Some marks or blemishes leftover from manufacturing may slip through QC.

Warping / Twisting

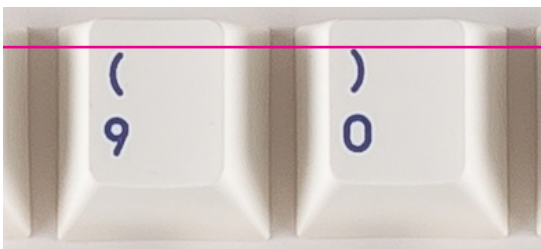

Longer keys such as spacebars have a propensity to warp slightly, and some caps may present with a slight stem twist.

These are due to the higher manufacturing temperatures for PBT and will be mitigated as much as possible.

Legend Bleed

Due to the texture present on these keycaps, and the process of dye sublimation, the legends will present with some slight bleed when compared to a “double-shot” legend.

Legend Drift

Some caps may have legends that have drifted slightly from their indented placement. This is due to the process of dye sublimation and will be mitigated as much as possible.

Color Fading

Reverse dye sublimated caps may present with fading towards their base. This is due to the nature of the sublimation process, and will be mitigated as much as possible.
