

ALUMINUM KEYCAP SETS

Manufacturing Standards

The following are items that fall within our normal manufacturing standards, and are to be expected with the purchase of this product.

Machining Marks

Caps with legends will have small machining marks. Some inconsistent patterning may present on the larger surface areas.

Blemishes

Because these caps are anodized aluminum, they are prone to some of the same issues as keyboards. Some caps may present small or minor blemishes such as anodization streaks or stains, chipping, or dents.

Underside

The underside of these caps will be raw aluminum on the finishing surface.

Fitment

Because these caps are metal, the stems may need to be carefully tightened or loosened in order to fit properly.

DO NOT force these caps onto your stems. Doing so will cause shaving and damage to your switches. Be especially careful with stabilized keys.
