

What's so SUPERIOR about MoBox? Features & Benefits:

BUILT TO LAST:

W Heavy-duty fiberglass construction. It is typically 1½ times thicker than the mass-produced boxes you find at big box retail stores. MoBox boxes are built to last!

- ★ Stainless steel gas springs are used as lid lifts
 to help raise the lid and keep it open, even on a
 rocking or floating dock. Other dock box companies
 offer powder-coated gas springs—usually at an extra
 cost. Ours are standard equipment.
- MoBox Dock Boxes and lids are reinforced and stiffened. They make great seats!
- Mobox uses marine-grade materials and components throughout the entire line. We do not cut any corners.

INTELLIGENT ASSEMBLY:

W Lids are attached with full-length marine-grade aluminum hinges and thru-bolt fasteners for optimum strength—NOT rivets. Other dock box manufacturers use rivets, which tend to loosen over time.

ATTRACTIVE—WITH PURPOSE:

- W Our **integrated foot design** keeps the bottom of the box off the dock, helping prevent the growth of mold and allowing your dock boards to dry.
- W Mobox Dock Boxes come standard with marine-grade UV gel coat—inside and out! Many mass-produced dock box companies use filled and pigmented resins, and they do not gel coat the interior of the box.
- Snow White or Buff (off-white) colors are standard. We have the capability to color-match any color.

MADE IN THE USA:

MoBox has two U.S.-based manufacturing and shipping points to better serve our customer base, which means less expensive shipping options.
